ERCON COMPOSITES, F-123, M.I.A., II-PHASE, BASNI, JODHPUR - 342005

## Ercon Composites contributes to Indian industry infrastructure

Ercon Composites has built up a reputation to stand for quality structures for Indian industry. Old project rehabilitation and New project installation are being carried out with equal ease in major industries in India.

### FRP/GRP PLATFORMS

Ercon Composites has been taking keen interest in the industrial infrastructure of late and has contributed significantly in the field.

Ercon is supplying huge platforms complete in FRP with base structure, gratings, handrails all in FRP/GRP.

The advantage of these platforms is that they are light weight structures and so old buildings can bear the load of

Cage ladder, complete platform with base structure, gratings and hand rails, installed on an old column of a rayon industry as replacement to the existing structure, which had corroded.

## ERCON GRP/FRP Structures in Indian Industrial & Other Projects

ERCON FRP Cage Ladders, Platforms complete with base structure, gratings & hand rails on chimneys of an industry.

the same easily. It also increases the life span of structures.

Ercon structures/platforms are now used for access to Bulk chemical storage/process areas at high altitude to approach for operating valves and other operations in high rise industrial columns/chimneys. Its platforms are being used as ergonomic comfort stands for the operators.

Ercon structures are light weight, high strength, corrosion resistant, fire retardant, aesthetic in looks and long life structures.

Chemical industries, Effluent/ Sewage water treatment plants, textile industries, refineries, food and drug industries, infrastructure projects, public utilities like municipal corporations, children parks and many more

## Platforms in ETP & Process Industry

have reaped the benefits of chlorine, bromine and acids Ercon's engineering. etc. are used.

Municipal corporations find it useful in their projects areas of ETP's and other corrosive areas. Similarly process platforms and structures are finding use in process industries specially where corrosive chemicals like A Children Library has used its Platform with Stair Case, with class rooms made by Porta Cabins by Ercon 's sister concerns' sandwich panels of foam filled GI with FRP structural beams and supports.

## STRUCTURES FOR GENERAL PROJECTS
